### Lab Task 1 (Basic PHP Practice): Student Cafeteria Billing System

#### Scenario:

A university cafeteria wants a simple PHP-based billing program. The program should take a student's information and calculate the total food bill based on the items selected.

#### Requirements

Write a PHP program that performs the following:

1. Store the following information using **variables**:
  - a. Student Name
  - b. Student ID
  - c. Food Item
  - d. Quantity
2. Use **switch-case** to determine the price of the selected food item:

| Choice | Food Item | Price |
|--------|-----------|-------|
| 1      | Burger    | \$5   |
| 2      | Pizza     | \$8   |
| 3      | Sandwich  | \$4   |
| 4      | Coffee    | \$3   |

3. Calculate the total price:

$$\text{Total} = \text{Price} \times \text{Quantity}$$

4. Use **if-else** to provide a discount:
  - a.  $\text{Total} \geq \$30 \rightarrow \text{20\% discount}$
  - b.  $\text{Total} \geq \$20 \rightarrow \text{10\% discount}$
  - c.  $\text{Total} < \$20 \rightarrow \text{No discount}$
5. Use a **for loop** to display the quantity of ordered items.

For example, if the quantity is 3:

Item 1: Burger

Item 2: Burger

Item 3: Burger

6. Finally, display a complete bill.

## Sample Output

=====

UNIVERSITY CAFETERIA

=====

Student Name : Rahim Ahmed

Student ID : 23-12345-1

Food Item : Burger

Price : \$5

Quantity : 6

Ordered Items:

Item 1: Burger

Item 2: Burger

Item 3: Burger

Item 4: Burger

Item 5: Burger

Item 6: Burger

Subtotal : \$30

Discount : 20%

Discount Amt : \$6

Final Bill : \$24

Thank you for visiting!

=====

## Concepts Students Must Use

- echo
- PHP variables
- Arithmetic operators
- if-else
- switch-case
- for loop
- Basic PHP syntax

**Student instruction:** Do not use classes or database connectivity. The objective is to solve the complete scenario using only the basic PHP concepts covered in this lab.

Note: Prepare a new Repo, Name it, Final Web Tech. Upload the task in the repo. Complete all the tasks for final in the same repo from now on.
